Breathe Into Your Massage

Mindful Breathing Enhances Bodywork Benefits

Cathy Ulrich

During her massage, Elaine was having trouble relaxing, continually talking about all of the stressors in her life. I took a deep breath and asked her to do the same. Suddenly, her body relaxed and I finally felt her respond to the work I was doing. So, what shifted with that simple suggestion?

In The Moment

Elaine was thinking about the stresses in her life instead of where she was at the moment. She was in a safe space, receiving gentle, supportive bodywork. And yet she couldn't relax. By simply asking her to be mindful of her breath, she immediately felt her body and became present with me in that space.

control labor pain. By consciously breathing during contractions, they learn to shift the feeling of pain to just sensation.

Elaine came to see me because she had chronic pain in her foot, knee, and hip. Often chronic pain sets up as a vicious cycle of muscle tightness, impaired blood flow, and more pain, even in areas distant from the original problem. When I asked Elaine to send her breath to the foot, she changed her feeling of pain to simply sensation and this opened a door that allowed me to change the holding pattern in her tissue.

Of course she couldn't physically breathe into her foot, but the imagery of

off with a smile
and get it over
with.*

-W. C. Fields

Mindful breathing brings an individual back into their body, facilitating presence and relaxation.

Many meditation traditions use the breath to quiet the mind. With mindful breathing, we're suddenly thrust into an awareness of our inner spaces and a feeling that we actually do live in a body.

Reduce Pain

One of the first things expectant mothers learn in natural childbirth classes is breathing techniques to help

sending warm, healing breath into her foot from the inside while I worked on it from the outside changed her relationship to the pain.

Try this simple technique yourself. As you tune into your breath, notice your body. Is there discomfort or pain?

Breathe in, and think of filling your lungs with healing oxygen. Now breathe out, and imagine sending this warm, healing oxygen directly to the place that hurts. Continue gently breathing into the area for a few minutes. What does it feel like now?

Relieve Stress

When I worked with Elaine, I noticed that the more she talked about her stressful life, the shallower her breath became. She was breathing high in her chest in short, rapid breaths. Her mind had transported her back to her stressful life, even though she was in a place where she was supported and encouraged to take a break from that stress, putting her body into a fight-or-flight response.

One clear manifestation of this is rapid, shallow breathing. While stress can produce this breathing pattern, the good news is that we can consciously change the breathing pattern and reduce the stress. It works both ways.

As I asked Elaine to slow her breathing and take deeper breaths, the tension in her face softened. Her body relaxed on the table as if she were sinking into the padding. Her feet became warmer, a sure sign that her circulation had changed and that her nervous system had switched from fight or flight to the calming mode of rest and digest.

Try this for yourself. The next time you're feeling stressed, stop for a moment and notice how you're breathing. Is your breath high in your chest? Is it fast and shallow? Now, gently invite your breath to slow down. Start to pull breath into your lungs by letting your belly relax and expand as you inhale. Spend a few moments with yourself and your breath and look at the stressful situation again. Does it seem so bad now?

Your Massage

Receiving a massage does involve participation on the client's part. While the practitioner is the expert on the bodywork, the clients are the experts on their bodies. In our culture, the client/therapist relationship is often a check-your-body-at-the-door affair. But so much more can happen when the client works with the therapist.

The next time you go for a massage, try these suggestions to achieve mindful breathing and enhance the benefits of your session:

- As you settle onto the table, feel the weight of your body on the table and begin to notice your breath.

- Feel your breath moving of its own accord. Where is it most noticeable? Bring into the spaces that feel less full (without effort--just invite).

- When your therapist starts working, notice the pressure and rhythm. When your practitioner lets up on the pressure, breathe in. When she/he applies pressure, breathe out.

- If your practitioner comes to a tender area, pay special attention to your breath. Work with the tenderness on the exhale, imagining that you're

breathing out the pain.

- As your therapist works on different areas, imagine your breath moving there to meet her. Send your breath wherever she is working. Let her work on the outside, you work on the inside.

- Notice the changes as the massage progresses. Notice your thought patterns. Notice your comfort level. Notice your stress (and how it melts) as you send breath to the various areas of your body.

- When your session is complete and you sit up, notice how your breath feels. What do you notice about your body, the room, the light?

Why not use the lifegiving force of breath to make your next massage an even more beneficial experience. Just breathe.

Being actively aware of your breath during a massage enhances the benefits of your session.

The Wonders of Water

For Skin Health and More

Shelley Burns, N.D.

Creams, nutritional supplements, treatments, lotions, and potions. We are always looking for the next miracle product to keep skin looking healthy and young. However, there is one essential, inexpensive, and often overlooked nutrient right at your fingertips: water.

Just as a car cannot function without oil, our bodies cannot function without water. After oxygen, H₂O is the most important component of the body, responsible for 65-70 percent of its composition. And of this, 80 percent is dedicated to the skin.

Water is the medium for various enzymatic and chemical reactions in the body. It moves nutrients, hormones, antibodies, and oxygen through the blood and lymphatic systems, and it also helps form the matrix of the skin. Devoid of water, the skin becomes dehydrated, resulting in a dry, dull tone.

It's likely that the moment a person feels

thirsty, mild dehydration has already set in. To keep the complexion looking smooth and blemish-free, drink water upon waking and continue drinking it throughout the day at one- to two-hour intervals. At least six 8-oz. glasses of water should be consumed daily and more if you are exercising, perspiring, and/or in hot weather. Ideally, intake should be between ten and twelve 8-oz. glasses of water a day. One note: Don't increase water intake all at once, as the kidneys and digestive system need time to adjust. Add one 8-oz. glass every day or every second day.

What counts toward your daily water intake? Just the basics: water and herbal tea. Caffeinated beverages and alcoholic drinks are diuretics that can contribute to dehydration, requiring even more hydration after drinking.

Not only is water important for skin health, it can also play a key role in the prevention of disease. Drinking eight glasses of water a day can decrease the

risk of colon cancer, bladder cancer, and potentially even breast cancer.

Water helps keep the body at optimum health.

Handwashing for Your Health

How to do it and why it helps

You know that washing your hands is important, but studies suggest that washing frequently and thoroughly can help keep you, and the people you come in contact with, healthier.

Clean and Healthy

Researchers in Denmark instructed students to wash their hands three times a day. According to the study, which was published in the *American Journal of Infection Control* (August 2011), the children that learned new habits significantly reduced their amount of absences due to illness.

Sanitizers or Soap?

A study by the American College of Preventive Medicine showed that alcohol-based hand sanitizers are less effective than soap at preventing

outbreaks of norovirus in long-term care facilities.

The Centers for Disease Control and Prevention (CDC) recommends using these sanitizers with at least 60 percent alcohol. Here is some more hand-washing advice from the CDC:

When Should You Wash Your Hands?

- Before, during, and after preparing food and before eating
- Before and after caring for someone who is sick
- Before and after treating a cut
- After using the toilet or changing diapers
- After blowing your nose, coughing, or sneezing
- After touching an animal or animal waste

--After touching garbage

What Is the Right Way to Wash Your Hands?

- Wet your hands with clean, running water and apply soap.
- Rub your hands together to make lather, then scrub the entire hand.
- Don't forget the backs of your hands, between your fingers, and under your nails.
- Continue for at least 20 seconds.
- Rinse your hands well under running water.
- Dry your hands using a clean towel or air-dry them.

*A person
without a sense
of humor is like
a wagon without
springs. It's
jolted by every
pebble on the
road.*

-Henry Ward Beecher

WHAT IS AN INTEGRATIVE HOLISTIC APPROACH TO MASSAGE?

Integrative simply means to pull from many different modalities in order to use the approach most suited to the client and their current issue. A holistic approach means that the whole person is considered. Joseph includes analysis of the past history of a client's physical self in order to have a finer picture as to what may be contributing to the tension or injury that causes them to come in and what procedures need to be taken. His extensive understanding of anatomy and physiology allows him to address issues in a deeper way than one might typically receive in a spa massage. Joseph's approach to massage is one that brings about true change in the body over time rather than a temporary quick fix.

A typical session lasts at least 1 hour and 20 minutes and the length depends on the need of the client at the time. Please allow a 2-hour window for the appointment. The rate for the initial visit is \$95. Subsequent sessions are now offered on a self-determined sliding scale of \$80-\$150. Shorter sessions are available on request.
